## DISCUSSION

The Energy Services Group site was a former manufacturer of oil industry equipment. The facility used a nitrating process to harden steel. The facility generated 1 55-gallon drum of sodium cyanide a year. The facility has been subsequently certified clean closed by the State of Texas. There are no waste sources remaining at the facility.

**Due to the lack of a hazardous waste remaining at the facility, the Energy Services Group site does not meet the minimum criteria of a viable candidate for inclusion on the Superfund National Priorities List; therefore, the site is designated a disposition of No Further Remedial Action Planned (NFRAP), and at this time does not warrant further investigation under Superfund.**

This site is being referred to the State of Texas for any appropriate action under the state's regulations.
